

Innopolis project execution method

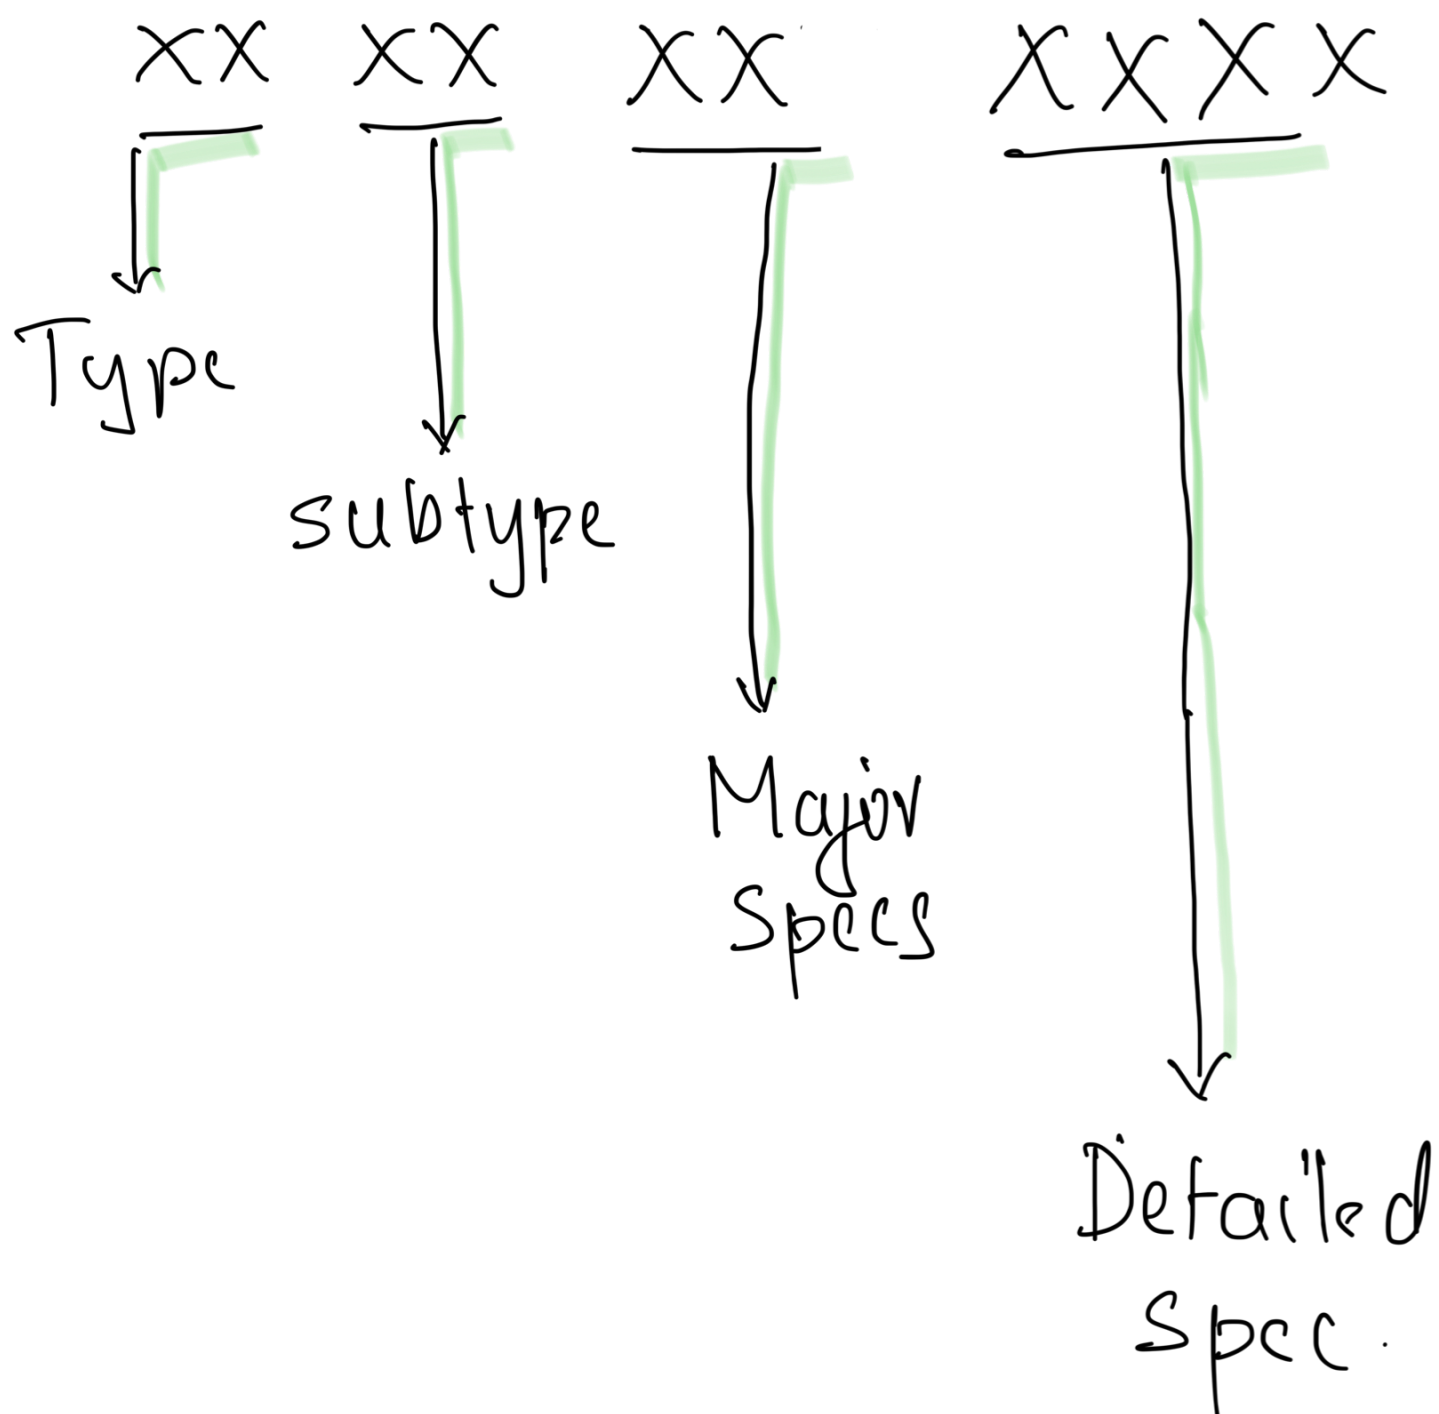

Material master creation

1. Create material

2. Define type — pick./pull down

- Mechanical Bought out
- Mechanical fabricated
 - Piping & accessories
 - structural materials
 - Process bought out
 - Field instruments
 - Panel instruments
 - Instrument accessories
 - Electrical
 - Reagents
 - Packings and fillings
 - Elastomers
 - Consumables

Creating material code

All these elements shall be picked up from pull down menu. And the major (admin rights) users shall be able to create new items / append masters in each case

Operation method

Create component type master tables

Create component and specs.

↳ Store basic specs

↳ Store buying specs

↳ Store drawings and specs

↳ Store vendor data

↳ Pricing data

↳ Current stock

↳ Current stock location.

Design the project → To next page

Make draft BOM

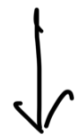

Upload / create BOM from pull down
and search inventory menu.

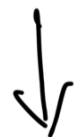

Create any new item that are not
existing in the inventory

Add buying notes.

Select vendors → specific / general

Collate BOM for a project.

Release for review - tech & commercial

Release for purchase

→ next page .

Purchase department

- should be able to get the BOM analysed and regrouped in the following ways

- Major itemwise
- Supplierwise
- leadtime wise
- Category wise cost basis.

↳ Means to sort on the basis of what category takes the most of money and next and so on.

- Create an RFQ based on vendorwise

↳ Request for quote

- Create a PO

- Update stock upon receipt and inspection
